

CRATE REQUIREMENTS FOR LIZARDS

(suitable for small or young animals not exceeding 50 cm [20 in] in total length)

Kindly note: Only the above crates will be accepted. We may not accept any modified or incorrect crates.

MEASUREMENT

- Lizards (including Chameleons) and tuataras should be measured by snout-to-vent length (SVL), tail length (TL) and in body width (BW)

SPECIFIC REQUIREMENTS

- All containers and bags should have some kind of packing material (i.e. crumpled paper)
- Animals in the same containers or bags should belong to the same size class to avoid damage to smaller individuals.
- The maximum number of animals per bag or container must not be increased even when larger bags or containers are used.
- If the bag is suspended the bag must be suspended horizontally from opposite ends of the bag the maximum number of animals per bag should be divided by two.
- For lizards, rigid containers can be used instead of bags with maximum of 25 animals, up to 30cm

total length. The length of the container should be at least the snout vent length plus half the tail length (TL)

- These containers must be rigid and able to support the entire weight of all the other containers when stacked upright and if turned upside down, without failing structurally (without bending, cracking or collapsing).
- The size of these containers must enable the animals to have contact with their whole ventral surface to the floor of the container. The size of the container will vary with the species. The container must be constructed in such a way as to provide a mechanism for viewing the contents of the container without opening it or allowing the possibility of escape of the animal(s)

FLOOR

- The floor of the container must be solid and leak proof

VENTILATION

- Depending upon the container, ventilation may vary considerably.

PetLounge

They're in good hands

Note: Permits are required for the air transport of certain Lizards into different Provinces.
